
(a) conditioning near the bound
Median $\min_j \kappa_j$
$r/[d(d-1)/2]$
$d = 6$
$d = 10$
$d = 16$
$d = 24$
(b) first-order sensitivity
Angle error of $\hat{w}_j$ (rad)
$\sin\Theta / \kappa_j$
$d = 8$, 0.1%
$d = 8$, 1%
$d = 16$, 0.1%
$d = 16$, 1%
$\sin\Theta \geq \kappa_j^2/2$
$y = x$
(c) basins of attraction, $d = 8$
Basin share × r
κ_j
$r = 12$
$r = 20$
$r = 24$
$r = 28$
